Take ordinary PDF documents and make them extraordinary! PageFlip™ provides end-users the life-like experience they desire when reading online publications. Page Flip™ is clean and intuitive - designed to work in harmony with the actual document. Documents can come alive with full interactivity and rich media content - including page and web links, video, audio and animation built into the pages themselves! It has comprehensive search and ROI metrics reporting. Bridges the gap between printed publications that sit on a person's lap - and those that sit on a laptop.
